

iPhone + iCard – A death preventing combination

NEWS

A company has developed an iPhone 4 case with a built-in ECG. Called the iCard ECG, it is smaller than a business card and sticks to the back of an iPhone or iPad using Velcro and immediately integrates with a companion application running on the device.

For a demo of the product, visit <http://alivecor.com/>; it is not

yet available for sale.

Real telemedicine seems within hands reach! Phone the doctor and relay your ECG.
